OZARK BEAUTY EVERBEARER

Ozark Beauty has been a real sensation wherever it has been grown but we have delayed offering it until a sufficient supply of virus-free plants was available. Now you can start with the best stock of one of the best everbearers of all times.

Ozark Beauty is well named since its berries are truly beautiful, with a bright sparkling color and fine green cap. The size is large throughout its picking season from June until frost and its flavor is unusually sweet and delicious. Production is extra heavy for an everbearer, with official yields as high as 12,000 quarts per acre. In our opinion one of the most important features is its good plant production and vigor which make Ozark Beauty a very dependable everbearer and much easier to grow than most strawberries of this type. Although it originated in the south, Ozark Beauty is very hardy since it has been tested for several years in areas where the winter temperature reaches 20° below zero or colder. See page 16 for further description of Ozark Beauty.

25 PLANTS $4.30; 50 PLANTS $6.50; 100 PLANTS $9.60; 1000 FOR $43.00.

SURECROP

THE MOST DEPENDABLE STRAWBERRY

LARGE GARDEN

100 SUNRISE — Early
100 SURECROP — Mid-Season
100 POCAHONTAS — Mid-Season
100 JERSEYBELLE — Very Late

400 Top Quality Virus-Free Plants

SPECIAL **$19.95**

Plus Postage

In addition to its big yield of excellent berries this amazing variety from the U. S. Dept. of Agriculture has triple resistance to the red stele disease; resistance to Verticillium wilt; resistance to leaf diseases; and drought resistance. These features, combined with its unusual vigor and hardiness, make Surecrop the easiest of all strawberries to grow and the most dependable variety. No wonder it is a "surecropper" for thousands of commercial growers and home gardeners throughout most of the eastern half of the United States.

If you want a strawberry that is truly outstanding for profit or pleasure you will certainly want Rayners' registered virus-free stock of Surecrop with its abundant production of large, firm, delicious berries.

See page 9 for further details.

25 PLANTS $2.90; 100 PLANTS $6.60; 1000 FOR $29.00. Complete Price List Page 17.

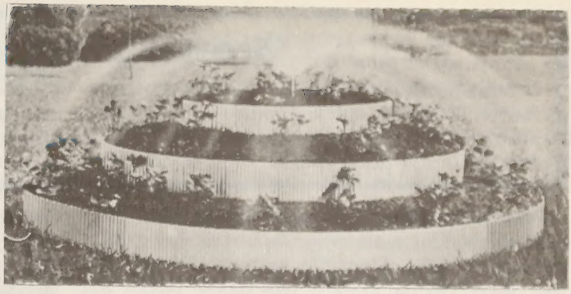
BERRY TERRACE

50 feet of row in a 6-foot space

IDEAL FOR SMALL YARDS

The Terrace is made of aluminum that holds its beauty for years. It will accommodate 50 Everbearing strawberry plants. The ease of watering and fertilizing enables much more production of fruit than would normally be realized. The beauty of foliage and blossoms and the harvest of berries from spring to frost will provide a constant delight.

You may prefer to grow one or two of the excellent June-bearing varieties in your pyramid. Do not remove the blossoms but cut off the runners and you will have excellent berries 60 days or less after planting.



NEW MODEL PYRAMID $8.98

Consists of three attractive corrugated aluminum bands with a base diameter of 6 feet. Complete with sprinkler system ready for attachment to your garden hose.

ACCESSORIES FOR PYRAMID

Cover (plastic) makes small greenhouse	$5.15
Support Strips (for cover)	$3.70
Net (for bird protection)	$6.70

How to Choose the Best Strawberry Varieties

Your choice of strawberry varieties depends, to a large extent, on the purpose for which they are to be grown. Some varieties are especially good for fresh eating, while others are quite tart, but good for long-distance shipping. Some are superior for freezing, and others are extra good for preserves. Some varieties will give fine results in nearly any soil, while others require very good growing conditions. Some varieties are resistant to diseases while others are susceptible. Below is a list of general strawberry characteristics when grown under normal conditions. It must be remembered that excess fertility and other conditions can greatly alter strawberry qualities. Thus, we strongly recommend that you try several of the most desirable varieties and decide which ones are best for your particular location. Complete descriptions of all our strawberry varieties are given in this catalog.

CHARACTERISTICS OF SOME STRAWBERRY VARIETIES

Best for Flavor and General Home Use: Redglow, Fairfax, Armore, Pocahontas, Suwannee, Sparkle, Midway, Sunrise, Redstar, Fletcher, Redchief, Surecrop, Guardian.

Best for Large Size: Armore, Robinson, Jerseybelle, Catskill, Empire, Pocahontas, Vesper, Guardian.

Best for High Yields: Catskill, Pocahontas, Surecrop, Earlidawn, Midway, Sunrise.

Best for Firmness: Guardian, Pocahontas, Surecrop, Tennessee Beauty, Earlibelle, Raritan, Redchief.

Best for Freezing: Midland, Pocahontas, Redglow, Sparkle, Surecrop, Earlidawn, Midway, Blakemore, Earlibelle, Fletcher, Redchief.

Best for Preserves and Jams: Blakemore, Suwannee, Pocahontas, Tennessee Beauty, Earlibelle, Redchief, Guardian.

Best for Vigor and Growth in Poor or Dry Land: Surecrop, Robinson, Premier, Blakemore, Sunrise.

Best for Resistance to Red Stele: Surecrop, Redglow, Sparkle, Midway, Sunrise, Guardian, Redchief.

Best for Resistance to Verticillium Wilt: Catskill, Surecrop, Premier, Robinson, Empire, Sunrise, Guardian.

Best for Resistance to Leaf Troubles: Fairfax, Premier, Midland, Surecrop, Catskill, Empire, Redstar, Tennessee Beauty, Guardian.

Best for Very Cold Climates: Robinson, Catskill, Sparkle, Premier, Midway, Fletcher.

Best for Southern States: Albritton, Pocahontas, Blakemore, Surecrop, Tennessee Beauty, Earlibelle.

Growing Strawberries

Strawberries are one of the easiest crops to grow. Good plants set out at the proper season in good soil will thrive with ordinary care and cultivation. There is nothing complicated about growing strawberries, and by following these easy instructions the beginner can be sure of good results. Rayner's registered virus-free stock is further assurance of success.

Where strawberries can be grown: In every state of the Union strawberries are grown at least to some extent. They are quite hardy and will give good results in any reasonably fertile soil that has good moisture. Like other fruit, strawberries require almost full sunlight for good fruit production.

Soil: A good soil for strawberries is one that is slightly acid, in good condition, and reasonably free of weed seed. Newly plowed pasture or sod may give poor results, but recently cleared woodland is excellent. All good garden soils will produce strawberries successfully.

Fertilizer: Important requirements for strawberries are high organic matter and high fertility. Before planting, plow down well-rotted barnyard manure, which is one of the best materials for good strawberry growth. If this is not available, other organic material is helpful. If you wish to use a commercial fertilizer, plow down 500 pounds to the acre of a complete fertilizer (8-8-8 or 10-10-10). This is equal to about 1¼ pounds per 100 sq. ft. If the soil contains a good supply of manure and is in a very high state of fertility, this is not necessary.

Use of a good soluble fertilizer at time of planting is recommended. It will not burn the plants and can safely be used at any time during the growing season.

In poor soils an application of cottonseed meal or a complete commercial fertilizer may be necessary 4 to 6 weeks after planting.

Strawberries have a high requirement for nitrogen, but it must be applied at the proper time or else very adverse effects may result. Fruit buds, which determine the spring crop, are developed in the plant during August and September. Therefore, this is the most important time to apply fertilizer. Most successful growers apply about 500 lbs. per acre of a 10-6-4, 8-8-8, or similar fertilizer at this time. This is equal to about 1 lb. per 80 sq. ft. of strawberry bed. The fertilizer should be spread directly on the plants when dry and then brushed off the leaves. If applied when the leaves are wet, injury may result.

An excellent organic plant food for strawberries and nearly all other plants is cottonseed meal. It is obtained entirely from ground cottonseed and is thus entirely organic in nature. Usually it contains about 6% nitrogen, 3% phosphoric acid, and 2% potash plus other important elements. Thus, cottonseed meal is a perfect plant food for those who follow the highly commendable practices of organic gardening. It is usually used at the rate of 4 lbs. per 25 ft. of strawberry row and will cause no injury or damage to the plants.

In general, it is best not to apply fertilizer during the spring on fruiting beds. This can cause excess plant growth, reduced fruit production, and poorer quality. We believe this is one of the most common causes of poor strawberry yields and recommend that fruiting beds should not be fertilized in the spring.

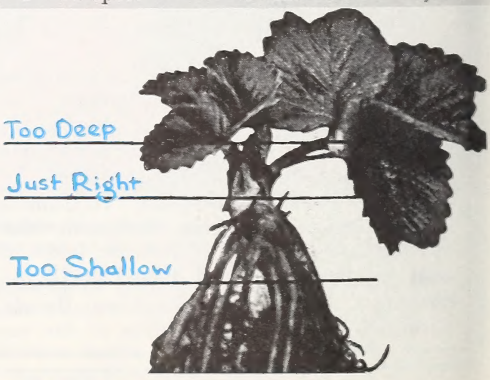
When to plant: Early spring is usually the best time to plant strawberries. In northern states it is best to wait until May or even June when the soil is in good condition. Frost or snow will not harm newly planted strawberries. *With Rayner's dormant plants, there is a definite trend to summer planting where irrigation is available. This gives a less crowded plant bed which yields unusually heavy crops of very large berries.* In cold climates we do not recommend planting after mid-July. Fall plantings are sometimes successful but are often damaged or completely destroyed by winter injury.

How to plant: It is important not to set the plant too deep or too shallow—see photo below. Do not clip the roots but spread them out full length and press soil around the plant so that the roots are firmly anchored in the soil. About a pint of water or soluble fertilizer solution should be poured around each plant when it is put in the hole. A good planting distance is 2 ft. apart in the row, with 4 ft. between rows. Slightly narrow fruiting beds will usually have better yields and higher quality than beds that are unusually thick. There are usually two extra plants per bunch, so set the extras at a row end and use if replacements are needed.

Plants Required Per Acre

Plants required per acre at various planting distances:

Rows	Distance in Row	Plants per Acre
3½ ft. apart	18 in.	8,325
3½ ft. apart	24 in.	6,225
3½ ft. apart	30 in.	5,000
4 ft. apart	15 in.	8,750
4 ft. apart	18 in.	7,300
4 ft. apart	24 in.	5,425
4 ft. apart	30 in.	4,375



STRAWBERRY CULTURE

(Continued from page 4)

Care of the plants: A few weeks after the strawberries are planted they will produce blossoms. For the regular matted-row system it is best to remove these blooms since the plants will make better growth. Hoeing and cultivation are necessary practices for weed control, but much benefit can be obtained by use of a good weed-killer. We recommend that you consult your state agricultural authorities for recommendations. We have used geese in our fields for grass control; about three per acre will do a good job on young grass.

In northern states it is important to mulch strawberries for prevention of winter injury. Straw, hay, or marsh grass are the best materials. It should be applied in the fall when the temperature first reaches 20°F and used so as to cover the plants to a depth of 3 to 4 in. About three to six tons of hay or straw per acre is needed. As soon as new strawberry leaves begin to grow in the spring, the mulch should be removed so that only about an inch remains. The rest should be kept between the beds where it will help keep the berries clean and free of rot. Even in the South many berries are mulched to help keep them free of dirt and decay.

Control of diseases and insects: Two soil diseases: red stele and verticillium wilt, sometimes damage strawberries. Below is a list of resistant varieties. In our No. 17 issue of "Better Berries" we have a chart showing control of diseases and insects. And in our No. 21 issue there is a full summary of strawberry culture. Write to Rayner Bros. Inc., Box 1617, Salisbury, Maryland 21801.

For further details concerning strawberries contact your county agricultural agent or write to your state agricultural extension service.

The Best Thing That's Happened to Strawberries—Since Jam

Guardian

RESISTANT TO RED STELE AND VERTICILLIUM WILT

As sure as strawberry jam is good to eat, GUARDIAN is the best new variety to come along for many years. This attractive midseason variety has a delightful flavor that you won't forget. You can preserve or freeze GUARDIAN and enjoy its wonderful flavor all year long. It has already become a favorite with all who have picked it. The huge, firm berries have a glossy shine that makes it very attractive for home gardeners as well as "pick it yourselfers." GUARDIAN holds its uniform light red color throughout the picking season and because of its firmness it ships well.

Since it is highly resistant to red stele, Verticillium wilt, powdery mildew, and leaf scorch, GUARDIAN is very appropriately named. Red stele and Verticillium wilt are two of the most troublesome diseases in strawberry plantings. Little can be done except to plant resistant varieties. GUARDIAN is a high quality berry that is resistant to five races of red stele as well as Verticillium wilt.

We strongly recommend that you plant GUARDIAN. No strawberry planting would be complete without this wonderful new variety.

25 Plants $3.75; 50 for $5.60; 100 for $8.50; 1,000 for $37.50. Complete Prices Page 17.

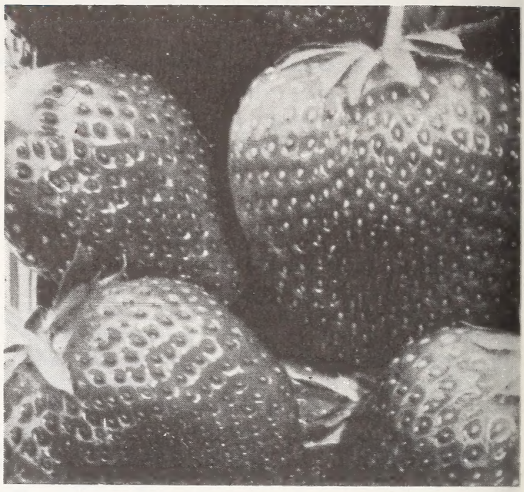
May 25, 1971

If not too late, send me 100 Guardian. I have never seen such berries for size and quality.

E. A. Brown, Vincennes, Ind.

Midland

VERY EARLY.
EXCELLENT QUALITY AND BEAUTY



Throughout the northeastern and central states, this is one of the finest of all strawberries for flavor, quality, and appearance. The berries are very large and have a beautiful deep red color. The flesh is firm and has a fine solid red texture that rates Midland as one of the best of all for freezing. Berries ripen very early and bring top prices, so this is a fine variety for either small or large-scale commercial use. On Long Island virus-free Midland has proven to be an outstanding variety for the high-quality New York market.

We strongly recommend Midland for home gardens and local sales where its excellent quality and fine appearance make it a real favorite. The plants are vigorous and resistant to leaf troubles and do not make too many runners as is the case with some varieties. Give Midland good growing conditions and you will be rewarded with a fine strawberry in all respects. Rayner's registered virus-free stock of Midland will bring the best out of this excellent variety.

25 Plants $3.10; 50 for $4.65; 100 for $6.95; 1,000 for $31.00. **Complete Prices Page 17.**
Our prices do not include Postage. See order sheet for postage and handling charge.

Premier

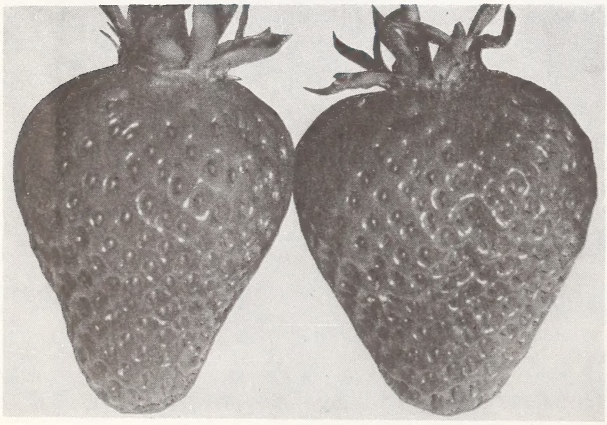
THE OLD FAVORITE EARLY BERRY

Premier was introduced in 1918 as Howard 17. Later it was renamed Premier and became one of the most widely grown of all strawberries. Even though it has been surpassed by many new varieties, Premier has remained a favorite because it ripens early and is frost hardy even in cold climates. It produces light red berries in abundance, and in most of the northern states it is considered a very dependable variety for home use or local sales.

25 Plants $2.95; 50 for $4.50; 100 for $6.65; 250 for $12.95; 1,000 for $29.50

Earlidawn

ONE OF THE BETTER EARLY VARIETIES FOR COMMERCIAL PRODUCTION



Earlidawn ripens before all other strawberries and produces tremendous crops that lead the customers right to your door for those early profits. Berries of Earlidawn are light red in color and have a fairly firm, light red flesh. The flavor is tart and when used for preserves and freezing this variety gives fine results.

Earlidawn does not make runners freely but in reasonably good soil it will make a good fruiting bed. Susceptible to Verticillium wilt, it should not be planted where tomatoes or potatoes have recently been grown. Despite its earliness Earlidawn has unusual frost resistance. It ripens rapidly and produces lots of big berries that make the rows shine with the unmatched beauty of red, ripe strawberries.

25 Plants $3.10; 50 for $4.65; 100 for $6.95; 1,000 for $31.00. **Complete Prices Page 17.**

Redglow

OUTSTANDING FOR FLAVOR AND BEAUTY

REDGLOW is our nomination for the best combination of beauty, flavor, and quality in a strawberry. It is so delicious that you and your customers will know you have found the variety that has all that can be desired in this respect. In addition, this fine early variety has resistance to the red stele disease and sufficient hardiness to withstand northern winters. For home gardens Redglow is a favorite because of its beauty and flavor, and for local sales these same fine features result in "repeat customers." Berry size is large and the outside color is a bright, light red while the inside color is also bright red. It grows well in nearly any reasonably fertile soil and with Rayner's virus-free stock you will obtain the full value.

25 Plants $3.00; 50 for $4.55; 100 for $6.75; 1,000 for $30.00

Earlibelle

EARLY COMMERCIAL VARIETY FOR SOUTHERN AREA

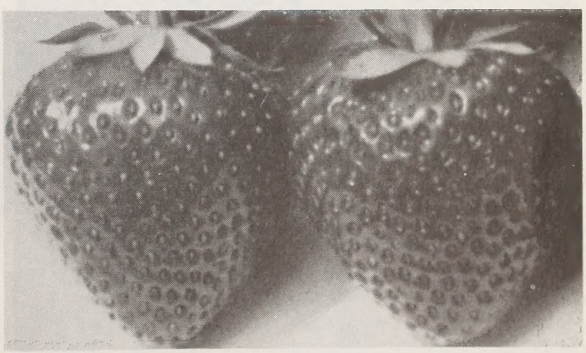
Earlibelle resulted from the cooperative breeding program of the United States Department of Agriculture and the North Carolina Agricultural Experiment Station. It has taken the place of Dixieland in some areas because its berries are unusually firm and thus excellent for a southern shipping variety. It ripens early and produces fine crops of beautiful, bright, tart berries that "hold their size." Earlibelle is a very vigorous variety and makes lots of plants even in sandy soil or dry weather. Dr. M. M. Parker, of the Virginia Truck Experiment Station, found this variety to be extremely productive, early in ripening, and to produce large, firm berries even when fruiting beds were crowded with plants. We recommend Earlibelle from eastern Maryland into Georgia and other southern areas.

25 Plants $2.90; 50 for $4.45; 100 for $6.60; 1,000 for $29.00. **Complete Prices Page 17.**

Sunrise

OUTSTANDING AROMA

AMAZINGLY PRODUCTIVE DISEASE RESISTANT



For several years this variety was tested as Md.-U. S. 2601 in many areas of the U. S. A. It was very promising with its high yields of large, firm, very bright, attractive berries that held their fine color long after picking.

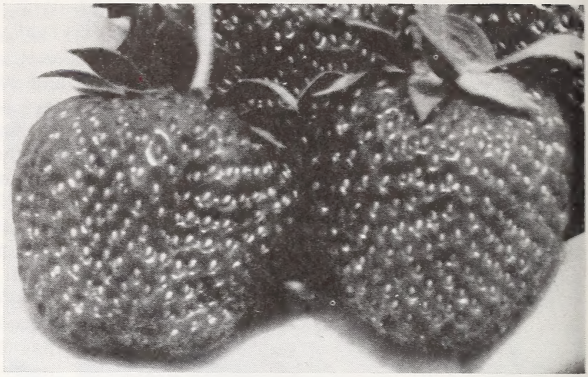
Sunrise has proven to be a real winner in the area from Maryland to Missouri. Its wonderful aroma has made it a favorite with the home gardener and the commercial grower. It has multiple resistance to red stele fungus and is resistant to Verticillium wilt. Sunrise ripens early—about 2 days after Earlidawn—and produces heavy yields of very attractive berries with a fine cap and pink flesh color. The flavor is good for fresh use and preserves but when frozen the color is a bit light for top quality.

Plants of Sunrise are vigorous and resistant to leaf scorch and powdery mildew but susceptible to leaf spot. This variety is also very drought resistant and may make an excess of runners, which should be removed for maximum yields. We recommend Sunrise as a very good early commercial variety especially in soils where red stele and Verticillium wilt occur.

25 Plants $3.20; 50 for $4.75; 100 for $7.05; 1,000 for $32.00. **Complete Prices Page 17.**

Fairfax

THE OUTSTANDING VARIETY FOR DELICIOUS FLAVOR



We recommend Fairfax for those who want strawberries with a truly delicious flavor. Since its introduction in 1928 by the U. S. Department of Agriculture, this variety has been a flavor favorite. Many commercial growers have customers who pay a premium price for this delicious berry, and many home gardeners always include it in their planting. Berries of Fairfax become a very deep red color when at their flavor peak, but for freezing the berries of medium red color give better results. Its fruit is medium to large in size, and production is good. Plants of our virus-free Fairfax are quite vigorous and winter hardy throughout the northeastern states. We believe that the sensational flavor of Fairfax makes it one of the very best varieties for home gardens from north to south. Rayner's virus-free plants will give best results.

25 Plants $3.05; 50 for $4.60; 100 for $6.85; 1,000 for $30.50. **Complete Prices Page 17.**

Suwannee

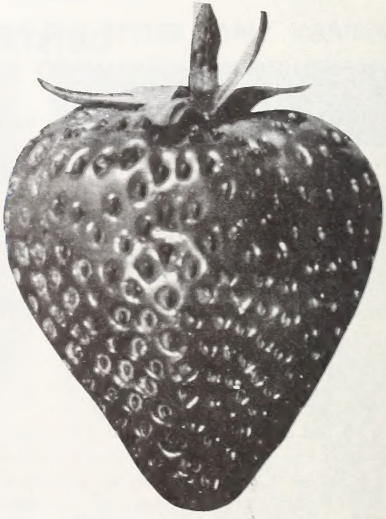
HIGH QUALITY EXCELLENT FLAVOR

Suwannee is considered by many experts to be the best flavored of all strawberry varieties. Besides having such a good flavor, it also makes good preserves and jam which can be enjoyed long after the picking season is over. The large light red fruit is rather long in shape, fairly firm, but will not stand long distance shipping. If you want outstanding flavor, you want Suwannee. Plant Suwannee in your garden this year. You will be delighted.

25 Plants $2.90; 50 for $4.45; 100 for $6.60; 250 for $12.75; 1,000 for $29.00

Robinson

Extra Large Berries



Robinson (also known as Kardinal King and Scarlet Beauty) has several outstanding good features that far outweigh its less desirable qualities. It is one of the most vigorous plant makers and will often give good results in poor soils where others fail. Fruits of Robinson are very big, and with their light red color they bring good prices. It ripens early mid-season. The plants are small but the fruiting beds are very wide and vigorous. Robinson is resistant to Verticillium wilt and is very winter hardy.

In cool climates the quality and firmness of Robinson is good enough to satisfy most customers. However, in warm areas it may not be suitable. Because of its vigor and large berry size, Robinson remains a favorite of many home gardeners and commercial growers in the northeast.

25 Plants $2.90; 50 for $4.45; 100 for $6.60; 1,000 for $29.00
Prices do not include postage

FOR BEST RESULTS PICK OFF BLOSSOMS THE FIRST YEAR

Surecrop

COLOR PHOTO INSIDE COVER

DISEASE RESISTANT, DROUGHT RESISTANT, UNUSUALLY VIGOROUS

Year after year Surecrop continues to be the most popular variety we have to offer. Because of its vigor and dependable crops of delicious fruit, Surecrop is highly in demand by both the home gardener and the commercial grower. In a test of seven locations, it averaged 1.37 quarts per plant set. One of the locations reported 13,600 quarts per acre. Its fruit was rated large in size, firm in texture, and of good freezing quality. Similar reports are obtained from so many customers in so many locations that we can unhesitatingly recommend Surecrop as a truly remarkable strawberry for both home garden and commercial production.

Surecrop has such vigor that it will often grow in poor or dry land where other strawberries fail. Also it has multiple resistance to the red stele disease as well as resistance to Verticillium wilt and other troubles. Because of its vigorous growth it is most important to prevent the fruiting bed from becoming too heavily matted and to avoid any spring application of fertilizer.

This excellent midseason variety has beautiful, firm fruit, with nice flavor and quality. Try Surecrop for one of the finest strawberries you have ever seen. Further information on back cover.

25 Plants $2.90; 50 for $4.45; 100 for $6.60; 1,000 for $29.00. **Complete Prices Page 17.**

Florida 90

BEST FOR FLORIDA

Because of the lack of cold weather in Florida there is not sufficient winter dormancy for fruit development in most varieties of strawberry. Florida 90 was developed in Florida for Florida conditions. This is the berry that is grown so extensively for shipment to the North. Its berries are large and elongate and have a rich red color and wonderful flavor. Not satisfactory north of Georgia.

25 Plants $2.80; 50 for $4.35; 100 for $6.45; 1,000 for $28.00. **Complete Prices Page 17.**

Pocahontas

EXTRA BIG YIELDS OF HIGH QUALITY BERRIES

Pocahontas was introduced in 1954 by the U. S. Dept. of Agriculture and the Virginia Truck Experiment Station and soon became one of the leading varieties for both commercial and home garden production. Such popularity is fully deserved since Pocahontas produces extra big yields of very large, bright, high quality berries that hold their fine appearance long after picking. Thus Pocahontas is a favorite with commercial producers where these features are so important. The excellent quality and large size of Pocahontas, together with fine plant vigor, also make it one of the best for home gardens. It ripens in midseason and yields amazing crops of beautiful berries that "hold their size" during its long harvest period. The berries have a fine bright skin with yellow seeds and a good clear red flesh color. Therefore Pocahontas is fine for freezing and preserves. From New York to Georgia and westward to Texas this variety is still one of the very best and we recommend it highly to all who want big crops of large, fancy berries.

25 Plants $2.95; 50 for $4.50; 100 for $6.65; 1,000 for $29.50. **Complete Prices Page 17.**

Our prices do not include Postage. **See page 18 and order sheet for postage and handling charge.**

Empire

FOR NEW ENGLAND STATES

VERY LARGE

Empire is another of the fine fruit developments of the New York State Experiment Station. Thus, it is well suited to the northern states where it is a fine midseason companion of Catskill. Yields are good, and it has sufficient frost and winter hardiness to be a very dependable producer. Empire is an especially attractive berry since it has a very glossy, medium red color and a fine green cap. The berry shape is somewhat elongate and irregular. Berry size is large, and this size holds up well for the entire picking season. The flesh color of Empire is somewhat pale, and it is a bit soft, but the flavor is very good. Its large size, fine appearance and good flavor rate Empire as a real profit maker in northern states. We definitely believe you will like this excellent variety.

Plants of Empire are very vigorous, winter hardy and resistant to Verticillium wilt. Runner plants are developed freely and result in a good fruiting row. In all the New England area, we believe you will have excellent results with Rayner's virus-free Empire which produces such extra-big berries.

25 Plants $2.90; 100 for $6.60; 1,000 for $29.00

June 14, 1971

We are pleased with your plants. They have such wonderful big berries. We had them 6 inches around.

C. Holbrook, Oxford, Pa.

Midway

GET YOUR SHARE OF BIG PROFITS FROM THIS NEW COMMERCIAL LEADER. EXCELLENT FLAVOR, FINE FOR FREEZING, RED STELE RESISTANT

Because of its tremendous production of delicious, firm, attractive berries, Midway has had a popularity explosion that causes the demand for plants to far exceed the supply. Be sure to place your order early. Within a few years this wonderful berry has become the king for both commercial production and home plantings. In Michigan, Ohio, Virginia, West Virginia, Maryland, New Jersey, Pennsylvania, and many other states it has become a sensational favorite. If you want to grow one of the best of all strawberries, be sure to get Rayner's registered virus-free stock of Midway. It has now proved to be one of the heaviest yielding of all strawberries and one of the best ever for big profits.

It ripens in early midseason, producing large, bright berries with extra fancy caps and bright yellow seeds. Berries of Midway have a nice uniform shape and hold their large size and fine appearance for the long harvest season. The berries have a firm flesh and firm skin, which permits long-distance shipment and results in a nice-looking berry a day or two after they have been picked. Midway is a delicious berry for fresh use and excellent for freezing and preserves. It has resistance to red stele and is a very good plant maker if conditions are at all favorable. Be sure to try this superior variety.

25 Plants $2.95; 50 for $4.50; 100 for $6.65; 1,000 for $29.50. **Complete Prices Page 17.**

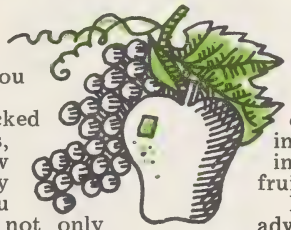
Yard & fruit

The different NEW magazine packed with information on how to grow your own fruit and beautifully landscape your property

It's easy, relaxing, and profitable to grow your own mouth watering fruits and berries — right in your backyard. *Yard and Fruit* shows you how.

If you've ever eaten freshly picked apples, peaches, cherries, blueberries, raspberries and strawberries you know how flavorful they can be — actually delicious. But most of the fruit you buy in your local supermarket is not only expensive, but tasteless as well. On top of that it may be covered with poisons and kept in cold storage for months.

Whether you have a crowded back yard or several acres you can grow your own flavorful, healthful foods. *Yard and Fruit* has the information you need to be a success.



How to do it

Yard and Fruit gives you complete, practical information on buying plants, shrubs, and trees, preparing soil, fertilizing, composting, pruning, propagating, recognizing and controlling insects and diseases, and storing fruit.

It's for beginners as well as advanced gardeners. No matter how many years you may have been gardening, you'll find *Yard and Fruit* a treasure house of new ideas and instruction that you won't find any other place.

In addition *Yard and Fruit* is richly illustrated with detailed time saving drawings and photographs.

(see other side)

In the months ahead *Yard and Fruit* will bring you articles such as these:

How to Grow an Edible Fence

Taking the Mystery out of Pruning

How to start your own Suburban Homestead

Storing a Year's Supply of Fruit

Landscaping with Fruit

A Master Plan

Yard and Fruit will show you, a busy home owner, how to draw up a master landscaping plan for your property. How to place trees, shrubs, lawn and flowers into a harmonious arrangement of bright colors and contrasting foliage. How to blend berries, vegetables, and fruit and nut trees into a tasteful, practical master plan.

By following a master landscaping plan you can add to both the beauty and the cash value of your property while enjoying flavorful, healthy foods from your own yard.

A New way of Life

Yard and Fruit shows you how you can get back to nature and enjoy natural foods. You can experience the satisfaction, the relaxing peace of mind that many others are now enjoying by working *with* nature — instead of against it. *Yard and Fruit* encourages you to discover the rewarding, creative experience of working with the soil. It's aim is to emphasize simple, natural living and show you how to enjoy the healthful foods nature has provided.

For about the cost of four pints of blueberries or four quarts of strawberries you can receive a full year's subscription to *Yard and Fruit* and learn how to grow your own luscious fruits and berries.

free

Charter issue

YARD AND FRUIT would like to send you FREE its beautiful, informative charter issue. For complete information on how you can take advantage of this offer, see the other end of this card near the back of the catalog.

and Farming

Dear Friend:

Here's a "No Money Down" invitation to get you to see for yourself the NEW ORGANIC GARDENING magazine. We're sticking our necks out as far as we can, so you will return the attached card that brings you the latest issue of the magazine PLUS a free book that shows how to use the most successful methods ever proven for the best lawns, roses, vegetable gardens, trees and shrubs you ever dreamed of. Here is our offer:

Mail the attached card today, BUT SEND NO MONEY.

We will send you a copy of "BEST GARDENING IDEAS I KNOW," the latest issue of Organic Gardening Magazine, and enter an introductory subscription of 10 months for $3.00. (A savings of $1.90 on the regular subscription rate.)

If -- and only if -- you decide that future issues of the magazine are worth getting and will help you to better garden results, then you can pay the small subscription cost.

You owe us nothing -- AND MAY KEEP EVERYTHING WE SEND YOU -- if you don't want future issues. All you need do is write "cancel" on the invoice you receive and that's it.

See for yourself why over 700,000 readers say Organic Gardening Magazine is "better than ever." Get easy-to-follow, expert advice on building your soil's fertility, vegetable and flower growing, insect control, and new plant developments. Please mail the postage-paid card today.

Sincerely,

Jerome Ilbs

Catskill

BIG YIELDS OF BIG BERRIES—OUTSTANDING FLAVOR

This famous berry has long been the leading variety in most of the northeastern United States. It is especially hardy and consistently produces unusually big crops. Berries of Catskill are large, bright in color, and of excellent flavor. They ripen in midseason and are a favorite for local sales and home gardens. Catskill is generally not firm enough for long distance shipment but is excellent for "pick them yourself" plantings. Plants of Catskill are very vigorous and resistant to leaf troubles and Verticillium wilt. This variety was introduced by the New York Agricultural Experiment Station in 1933 and still remains a favorite with thousands of growers who praise its bumper crops of big delicious berries. Through Penna. and northward into Canada, Catskill gives fine results in nearly any soil that is reasonably fertile and moist. Rayner's virus-free true-to-name stock assures you of the best possible results with Catskill.

25 Plants $2.95; 50 for $4.50; 100 for $6.65; 1,000 for $29.50. **Complete Prices Page 17.**

June, 1971

I am writing to tell you about the excellent results we are receiving on our 4,000 plants that we bought from you last year. Some of the plants produced almost three quarts per plant.

R. Melton, Evansville, Ind.

Raritan

COMMERCIAL FOR N. J.

RARITAN was introduced in 1968 by the New Jersey Agricultural Experiment Station. This variety has performed very well in New Jersey and has gained wide acceptance by the commercial growers who have tested it. We strongly recommend it for New Jersey and feel that it is certainly worth a trial in the neighboring states.

In addition to having large glossy red fruit with an attractive cap, Raritan is firm and ships very well. Because of its beauty and excellent shipping qualities, Raritan will soon be the favorite early midseason to midseason variety in New Jersey. The fruit has an excellent eating quality and is recommended for fresh market and table use but not for freezing. Plants run freely and produce a good bed in the matted-row system. The demand for this excellent variety is expected to be heavy, so order early to insure getting your plants.

25 Plants $3.50; 50 for $5.25; 100 for $7.90; 1,000 for $35.00
Prices do not include postage. **See page 18.**

Albritton

CAROLINA FAVORITE

ALBRITTON is a leading commercial and home garden variety in the coastal region of North Carolina and will give good results southward into Georgia and northward into Virginia. In this area it produces berries that are unusually attractive and of fine quality but unfortunately Albritton does not give good results in colder climates. Rayner's virus-free stock of Albritton is especially vigorous and productive.

25 Plants $2.80; 50 for $4.35; 1,000 for $28.00. **See order sheet for postal charges.**

Redchief

NEW RED STELE RESISTANT
HIGH QUALITY MIDSEASON VARIETY

REDCHIEF, introduced in 1968 by USDA and Maryland Agricultural Experiment Station, is a new midseason variety that is suitable for the home gardener as well as the commercial grower. It is ideal for "pick your own" plantings. Redchief's sweet flavor, uniform red color, and firm glossy surface make it a high quality dessert berry. It makes good jam, and its high quality is also maintained when frozen. Being a firm berry it ships very well and holds up during the picking season.

REDCHIEF is resistant to five strains of red stele, leaf scorch, mildew, and moderately resistant to Verticillium wilt. The plants have medium vigor, make a good matted row, and produce above average yields. Redchief has performed very well from Maryland north to Massachusetts and west to Illinois. There are nothing but good reports from commercial growers in Michigan. With Rayner's virus-free plants, you will be more than pleased with this wonderful new variety.

25 Plants $3.50; 50 for $5.25; 100 for $7.90; 500 for $22.75; 1,000 for $35.00

July 19, 1971

The Redchief berries were the largest berries I ever saw and most productive. I picked over 300 quarts from my small patch (100 plants).

J. Mumma, Greenville, Ohio

Marlate

EXTRA LATE — EXTRA LARGE

Marlate is a new extra late, high quality variety that extends picking well past the regular season. The plants are vigorous and it appears to be resistant to leaf diseases. The berries are large, bright, firm, and very attractive. Marlate holds its size throughout the harvest season, and the fruit stems snap freely making them easy to pick.

This variety has been tested thoroughly in Maryland, Pennsylvania and neighboring states and certainly, appears worthy of trial for those who want an extra late variety that ripens after Jerseybelle but before Redstar. Supply is limited for this variety.

25 Plants $3.75; 50 for $5.60; 100 for $8.50; 250 for $16.40. Prices do not include postage.

Sparkle

FAVORITE LATE VARIETY FOR FRESH USE AND FREEZING

For many years Sparkle has been the most important late strawberry in much of the northeast. It was introduced by the New Jersey Agricultural Experiment Station in 1931 and soon became very popular because of its many outstanding qualities. Sparkle is a very dependable producer of fine crops of glossy, sparkling berries. They are of medium size, have a nice cap, and yellow seeds. Berries of Sparkle have very good flavor and quality and are rated very good for freezing and for preserves. Sparkle generally ripens just after the midseason varieties and is a very important commercial variety north of Maryland. It is very winter hardy, giving good results even in parts of Canada. It is a good plant maker in most types of soil. As an extra feature Sparkle is resistant to red stele and leaf troubles. Plants of Sparkle are naturally quite vigorous, but with Rayner's virus-free stock they have that extra vitality that really makes this a great favorite for both commercial growers and home gardeners. In Michigan there is a variety known as Paymaster that is generally considered to be the same as Sparkle.

25 Plants $2.95; 50 for $4.50; 100 for $6.65; 1,000 for $29.50. **Complete Prices Page 17.**

Jerseybelle

HUGE, BEAUTIFUL BERRIES—LATE—VERY PRODUCTIVE

If you want big strawberries you want Jerseybelle.

This popular berry was introduced by the New Jersey Agricultural Experiment Station and soon became very popular because of its huge, bright, beautiful berries which bring the highest prices. They are therefore excellent for roadside stands, auction markets, and similar sales where your customers will pay more for fancy berries. And if you want a berry you can truly be proud of then you will find the answer in Jerseybelle since a quart of these berries is truly a sight to behold.

Berries of Jerseybelle have consistently been about the largest of any variety we have ever seen, and they have a beautiful glossy color that gives a waxed appearance. The cap is large and the seeds are bright yellow, resulting in a berry of unusual beauty. The flesh is not nearly as juicy as in some varieties, thus Jerseybelle will hold its appearance quite well. The flavor is not as good as for some berries but is satisfactory. The ripening season is quite late, about a week after Sparkle, which greatly helps to prolong the picking season.

Jerseybelle may show some leaf troubles but generally this is not a serious problem. In northern soils, it is best not to plant Jerseybelle in land recently grown to tomatoes, potatoes, or other strawberries. But if you are looking for that extra big berry that will make real profits, you will make a planting of Rayner's registered, virus-free Jerseybelle.

25 Plants $3.10; 50 for $4.65; 100 for $6.95; 1,000 for $31.00

See order sheet for postage and handling charge

Redstar

LARGE EXTRA-LATE

The big feature of Redstar is its unusual lateness. It ripens a week or more after the normal late varieties. Thus, Redstar is very popular with both home gardeners and commercial producers who want to extend the berry season as long as possible. Another advantage of this lateness is that Redstar rarely is hurt by frost and thus is a dependable producer throughout most of the Eastern states.

Redstar does best in fertile soil where it will make a nice bed of unusually large plants. The fruit is large, attractive, and has a very big cap that makes Redstar a beautiful berry. Flavor and quality are good, and it makes a nice frozen product.

Rayner's registered stock of virus-free Redstar has resulted in a great increase in popularity of this fine variety. It still requires good growing conditions for best results, but now Redstar is much more dependable.

25 Plants $3.15; 50 for $4.70; 100 for $7.00; 1,000 for $31.50. **Complete Prices Page 17.**

Armore

LARGE BERRIES—LATE—FINE FLAVOR

For many years ARMORE has been a favorite variety with home gardeners and local market growers. This variety is well suited throughout the area from Missouri to New England. Although rated as a late variety it ripens several days ahead of such extra-late varieties as Redstar and Vesper. Armore is a good plant maker and grows well in most soils.

Its foliage is subject to leaf troubles but this does not seem to interfere with heavy yields of large, delicious berries which have a good red color inside and out. For big yields of a large, late, sweet berry be sure to try Rayner's virus-free stock of Armore.

25 Plants $2.90; 50 for $4.45; 100 for $6.60; 1,000 for $29.00. **Complete Prices Page 17.**

Vesper

HUGE BERRIES—VERY LATE

Vesper, which was tested as New Jersey selection No. 157, provides strawberry growers with the biggest and one of the latest of all strawberries. This variety is truly amazing because of its huge berries, which are as large as any variety we know. It is much like Jerseybelle in most respects, which it now displaces as champion for berry size. For lateness it is about as late as Redstar, which is generally considered to be the latest of all June bearing strawberries. Foliage of Vesper is generally vigorous but like Jerseybelle is a bit more susceptible to leaf troubles than some varieties. But with proper growing conditions Vesper can be one of the most remarkable strawberries you have ever seen.

The unusually late ripening of this variety is additional reason why it can be a real profit maker, since you will still have fine berries after other strawberries are gone. Be sure to try at least a few of this amazing new variety that will show you and your friends just how big a strawberry can be.

25 Plants $3.20; 50 for $4.75; 100 for $7.05; 1,000 for $32.00. Plus Postage.

Fletcher

WINTER HARDY
HIGH QUALITY

FLETCHER was released by the New York Agricultural Experiment Station in 1959 as a result of the outstanding breeding program of Dr. George L. Slate. For several years this variety has been tested in New York and other states and has proven to be a very promising berry for both home use and commercial production. It is a cross of Midland with Suwannee, both of which have excellent quality, and as a result Fletcher has a wonderful flavor that should appeal to all who appreciate good strawberry flavor. Berries of Fletcher are reasonably large, bright in color, excellent for freezing, and sufficiently firm for commercial marketing. The plants are vigorous, tall, and very productive. Fletcher is a fairly late variety—ripening about 3 days after Sparkle. It is very winter hardy and well adapted to northeastern conditions.

25 Plants $3.05; 50 for $4.60; 100 for $6.85; 1,000 for $30.50. **Complete Prices Page 17.**

Blakemore

THE BEST FOR PRESERVES AND JAMS—WONDERFUL FOR FREEZING

Because of its fine qualities when processed or frozen BLAKEMORE once was the most widely planted commercial strawberry. Its sparkling, light-red, firm berries still produce the finest, most attractive preserves you have ever seen. When frozen the berries hold their shape well and have fine color. For a special attraction freeze some whole, with caps attached. Plants of Blakemore are especially vigorous and will grow well in nearly any soil. This early variety is especially suited to moderate climates but should do well in all but the coldest states. If you like strawberry preserves be sure to try Blakemore.

25 Plants $2.80; 50 for $4.35; 100 for $6.45; 1,000 for $28.00.

Tennessee Beauty

LATE COMMERCIAL VARIETY
FOR SOUTH-CENTRAL STATES

Tennessee Beauty is recommended as a commercial variety in south-central and eastern states, where its firmness is a definite advantage. Many growers tell us that it is their best producer.

The berries are of medium size and have a bright, rich red color. The flavor is good, and the slight tartness results in fine quality. For freezing and preserving Tennessee Beauty rates high since it produces a fine bright product. One feature of this variety that is desirable for processing is the ease with which the cap comes off. With its many fine features such as good quality, firmness, beauty, and high production, Tennessee Beauty is definitely a good variety for both commercial and home plantings.

Although we do not recommend large-scale planting of Tennessee Beauty in the northern states, it is considered a good commercial variety in some sections.

25 Plants $2.90; 50 for $4.45; 100 for $6.60; 1,000 for $29.00. **Complete Prices Page 17.**

EVERBEARING STRAWBERRIES

PICK DELICIOUS STRAWBERRIES SPRING, SUMMER AND FALL

Ozark Beauty

VERY PRODUCTIVE AND HARDY. THE FAVORITE

We wish we could show you the many letters of praise we have received concerning the outstanding performance of our virus-free stock of Ozark Beauty. Below is just one of the many favorable comments on Ozark Beauty. For an everbearer, it has an unusually good flavor which is most rewarding in the fall. Plants of Ozark Beauty are very vigorous and will give good results in almost any reasonably fertile soil where they grow rapidly and produce lots of runners. For best results the first crop of blossoms should be removed from newly set plants but in late summer a fine crop of big, delicious berries will be produced. Then, the next spring you will be amazed at the heavy production of very large, attractive, delicious fruit and another great crop in the fall.

25 Plants $4.30; 50 for $6.50; 100 for $9.60; 1,000 for $43.00

April 20, 1971

Our pyramid and 50 Ozark Beauty plants have been entirely beyond our expectations. We look forward to trying new varieties and appreciate receiving such healthy plants.

G. Shano, Park Ridge, N. J.

Superfection

GOOD FLAVOR VERY DEPENDABLE

Superfection is our most dependable everbearer. It is a vigorous grower and readily produces good fruiting rows. This variety is also known as Gem and Brilliant.

The berries can be very large and quite attractive. The color is a good light red, and the flavor ranges from mild to tart. Superfection is not as good as the June-bearing varieties, but it will give you a fair amount of nice berries in June and July and another crop in the early fall that will continue until freezing weather. Fine for home gardens.

25 Plants $4.10; 50 for $6.25; 100 for $9.20; 1,000 for $41.00

1972 PRICE LIST

VIRUS-FREE

Strawberry Plants

These prices supersede all other prices of Rayner Bros. Prices do not include shipping charges. Several varieties cannot be combined to obtain a lower price. Full planting instructions are sent with each order. We do not sell less than 25 of a variety.

V.F. "Plants referred to as "virus-free" in this catalog have been field grown by us from virus-free foundation stock furnished by the U. S. Department of Agriculture Bureau of Plant Industry, Soils and Agricultural Engineering, Beltsville, Maryland, and State Horticultural Department, University of Maryland. Our field-grown stock has been dusted with parathion to control aphids which transmit the virus diseases. It has also been grown at considerable distance from any other strawberry plants. Since viruses do not produce clear-cut symptoms in most strawberry varieties, but simply weaken and devitalize the plants, no guarantee can be made that these plants are 100 percent free of viruses. Because of the measures that we have used to protect these plants from virus infection, we believe them to be substantially virus-free."

WRITE FOR QUOTATIONS ON LARGER QUANTITIES

To Our Customers and Friends

Jack Rayner
President

Curtis Massey
General Manager

This past growing season has been exceptionally good, and as a result we have a good supply of vigorous plants for you. Guardian, the new midseason strawberry variety, has exceeded all expectation. Also, the new Marlate is proving to be a good late-season variety. You should order these two varieties early.

In reading this Berry Book you will find that it is more than just a nursery catalog. In addition to detailed descriptions of different varieties, it contains helpful growing instructions, especially on strawberries and blueberries. We hope you will read the growing instructions presented since they will help you to have good results with our plants. Planting instructions are sent with each order, and special bulletins are available upon request. Give your plants good treatment and they will reward you many times over.

All our strawberry plants are certified and virus-free. In our nursery, rigid controls must be followed to produce virus-free, nematode-free, and red stele free plants. It is well worth the extra effort because tests have proven that certified virus-free plants yield over 100% more fruit than other plants.

We are happy to answer any questions not answered in the Berry Book or special bulletins. Please feel free to write. We want you to be successful with all the plants you purchase from us.

H. Jack W. Rayner, *President*

"We guarantee you will receive top quality stock. If for any reason you are not pleased with our plants, write us within 60 days and we will replace the plants or refund the complete purchase price. After the 60 day period and within one year of the date the plants were purchased, we will replace at one-half price any plants that are not satisfactory. This guarantee covers full purchase price and does not imply any further responsibility or liability." This guarantee applies to all of our nursery plants that are planted during the spring season and to strawberries planted by July 15.

INSTRUCTIONS TO PURCHASERS

Place your order early so it can be shipped at the time you specify. If you wish to wait until it is time to plant before sending your order, please allow 10 days for us to ship your order.

We can ship by Parcel Post, UPS, Air Freight or Bus. Please check the appropriate block on the order sheet.

SMALL ORDERS—5,000 strawberry plants or less.

PARCEL POST—Add 10% of the total order for postage and handling for orders of $7.00 or more. For orders less than $7.00, add 70c. For orders west of the Mississippi, the charge is 15% of the cost of plants with a minimum of $1.00.

UPS—United Parcel Service is a private delivery service. Generally, delivery is faster by UPS than by Parcel Post. **If your address is RFD or P. O. Box, please indicate name of road or street.** There is a postage and handling charge of 10% of the order with a minimum charge of 70c. We can ship only 100 pounds (about 3,500 plants) to you each day by UPS. If your order weighs more than 100 pounds, we will split your shipment over a couple of days.

LARGE ORDERS—over 5,000 plants or 50 fruit trees

We recommend picking up large orders at our packing house: Monday through Friday, 7:00 A.M. to 5:30 P.M. or Saturday, 7:00 A.M. to 12:00 Noon. If plants are to be shipped by Air Freight or Bus, indicate closest airport or bus station.

AIR FREIGHT—This is the fastest way to ship plants. If does cost more, but gives very fast service. Check with your airport for rates. Allow 25 pounds per 1,000 strawberry plants. Pay shipping charges when order arrives.

BUS—If you are close to a bus station, this is a good way to have your order shipped. Be sure to send your phone number so you can be called when your plants arrive. Pay shipping charges when plants are received.

BUY RAYNER'S PLANTS AND YOU BUY THE BEST

MacDonald RED

Rhubarb

RHUBARB is a very popular perennial where winters are sufficiently cold to freeze ground 3 to 4 in. A few plants well tended make an excellent supply for sauce and pies.

We offer the MacDonald Red variety because of its marked superiority. Matures earlier, sweeter, and one planting lasts a lifetime. Plant in spring, 3 to 4 ft. apart. Rhubarb culture is given in Bulletin No. 18.

Prices for Large, Vigorous Divisions $1.10 each; 3 for $3.00; 10 for $8.75.

VICTORIA RHUBARB

For those who want vigorous, seedling rhubarb roots we recommend the well-known Victoria variety. These whole roots will soon become established and produce lots of long, tender, pink stalks that are excellent for home use. Gives best results in cool climates and in fertile, deep soil with a uniform supply of moisture. Prices of Victoria Rhubarb:

Strong 1-yr. whole roots, 1 to 1½ in. diameter: 5 for $1.65; 10 for $2.75.

HORSERADISH

This is the old-fashioned Maliner Kren variety that is very vigorous and develops such large firm roots. Grows best in moist, cool soils of reasonable fertility. If you like horseradish, you will surely want to try this excellent variety. A few roots will soon develop into a fine bed that will last for years.

Vigorous whole roots about 6 to 8 in. long: 5 for $1.60; 10 for $2.75.

TENDER, FRESH

Asparagus

From Your Own Plantings Year After Year

The best eastern variety for home and commercial planting is the disease-resistant MARY WASHINGTON. We sell only the famous Robert's strain, which is the best asparagus money can buy. It produces shoots of finest quality, more uniform in size, shape and color than others.

50 to 100 roots supply an average family. 250 roots will take care of canning and freezing needs, too.

A planting of Rayner's asparagus will yield loads of fine food for many years. Plant early in the spring in fertile soil to which about 5 lbs. of 10-6-4 fertilizer per 100 sq. ft. has been added. Spread the roots in a trench about 6 in. deep and 8 in. wide. Place plants about 16 in. apart and cover crowns with about 2 in. of soil. As plants begin to make new growth, gradually fill the trench.

Write for Rayner's Bulletin No. 18 giving full details of Asparagus culture.

ASPARAGUS PRICES—ORDER EARLY FOR SPRING PLANTING

	6 plants	12	25	50	100	250	500	1000

Big 3-Yr. Roots will produce some stalks large enough for cutting the second year. These prices do not include postage. See page 18 and order sheet for postage and handling charge.

RED RASPBERRIES

GROWING

For best results raspberries should be planted in the early spring in good fertile soil that retains moisture but is not poorly drained. In small plantings the rows are usually 6 feet apart with 3 to 4 feet between plants. Plants set this spring will produce a crop about 15 months after planting. After the first fruiting season, the old fruiting canes of regular red and black raspberries are pruned out, leaving the new canes to bear fruit

CERTIFIED

These certified plants are state inspected for freedom of insects and diseases. They have given thousands of customers many years of profitable production in both the home garden and com-

New!! SENTRY

For the first time in many years we are pleased to introduce a new red raspberry variety. Originating in College Park, Md., by Dr. I. C. Haut, Sentry has firm, medium-red berries that ripen early-midseason. This high quality berry ships very well. Order your plants early. You will be more than pleased.

LATHAM is the standard red raspberry for most of the eastern states. Its plants are hardy, producing big crops of large, high-quality fruit, fine for fresh use, freezing, or preserves. Latham is fine for home gardens and excellent for commercial plantings, for its berries hold up well for shipment. It is hardy in our coldest climates and very late in ripening.

SEPTEMBER EVERBEARING RED RASPBERRY is from the New York Experiment Station. It is truly an outstanding variety, producing a wonderful crop of high-quality, early berries during the regular summer season and other fine crop that begins to ripen early in the fall. September is a real winner for home use where its firm berries, which are free from crumbling, are especially nice for freezing.

VIRUS-FREE

As a result of research by the USDA it was found that raspberry plants were infected by viruses, some of which are hard to detect. Test results also indicated that YIELDS CAN BE DOUBLED BY PLANTING VIRUS-FREE PLANTS. In keeping with the policy to offer the best plants available, Rayner Bros. was the first nursery to offer virus-free plants to the public. These plants have been propagated from

NEW!! REVEILLE is another new red raspberry by Dr. I. C. Haut. It has large size, excellent flesh quality and outstanding flavor. It is not firm enough for shipping but we feel it will become the leading variety for home use and roadside sales because of its good flavor and appearance. It is certainly a delicious high quality berry.

LATHAM is the most widely grown red raspberry since it is a very dependable producer in such cold climates as Minnesota and North Dakota as well as the southern raspberry area. This variety yields big crops of large, firm berries with a delicious flavor. It ripens very late and thus provides berries long after the regular season. Latham has long been a standard commercial and home variety.

NEWBURGH is an excellent early-midseason red raspberry that is excellent for commercial production because it produces fine crops of very large, very firm attractive berries of good quality. It has vigorous, hardy plants of medium height and is less subject to mosaic infection than most red varieties.

BLACK RASPBERRIES

RASPBERRIES

the next season. With everbearing raspberries the canes which produced the fall crop should be cut back slightly in the spring. A large amount of rotted manure mixed into the soil before planting is very beneficial. A regular spring application of rotted manure, cottonseed meal, or about ½lb. per plant of 10-10-10 fertilizer is recommended. A local spray program for insect and disease control is available from your County Extension Agent. Send for Better Berries No. 14.

PLANTS

mercial plantings. Raspberries are an ideal fruit to follow strawberries for roadside stand or pick-your-own sales. Plant several varieties to extend the picking season.

LOGAN is a fine early black raspberry, ripening about a week before Cumberland and producing fine crops of beautiful, high quality berries. Very hardy and vigorous.

BRISTOL is a fine midseason black raspberry with large, round, firm berries of very good quality. It is very vigorous, winter hardy, and produces big crops.

CUMBERLAND ripens in midseason and gives big yields of beautiful black raspberries of unsurpassed flavor and quality. Its plants are vigorous, hardy and adapted to various soils.

PLANTS

virus-free foundation stock and maintained substantially virus-free by following a special program of isolation, spraying, and inspection. To obtain full benefit from virus-free plants, they should be planted at least 200 feet from other brambles, and a program for control of aphids should be followed. An increase in vigor, production, and quality will far outweigh any additional cost for virus-free plants.

PLUM FARMER is an early black raspberry from Ohio that has long been a favorite because of its vigor, drought resistance and fine crops of large, bright, firm berries. The crop ripens rapidly and uniformly so that it can all be harvested in two or three pickings. One of the hardiest black raspberries.

BRISTOL is an excellent midseason black raspberry that is very popular for home or commercial use. Big crops of very large, round, firm berries that have a fine sweet flavor and excellent quality. Plants are vigorous, with good winter hardiness and are adapted to a wide range of growing conditions.

RAYNER'S Dependable Fruit Trees

PLANT NOW FOR YEARS OF FRUIT FROM YOUR OWN TREES

APPLE TREES

WINESAP, IMPROVED STRAIN. Beautiful deep red color. Vigorous, hardy, productive, early bearing. Rich flavor. Crisp, tender apples of long-keeping quality.

GOLDEN DELICIOUS. Heavy yielding, early bearing. Bright golden yellow, crisp, juicy apples. National favorite.

RED McINTOSH. A leading commercial variety. Fancy red apples with white, tender flesh of high quality and aroma. Tree very hardy and vigorous.

RED DELICIOUS. Large apples of rich red color and excellent flavor and aroma. Uniform fruit. Tree very hardy. Great favorite with home gardeners as well as orchardists.

APPLE TREE PRICES	Each	3 to 9 trees Each
2-Yr., 3 to 4 ft.	$3.25	$3.00

PEACH TREES

GOLDEN JUBILEE. An unusually hardy tree unequaled for production of early yellow freestone peaches of exceptional quality. One of the most dependable for home gardens.

HALE HAVEN. A deep crimson freestone peach. Flesh is golden yellow, firm and of unusually good flavor. Strong, thrifty. Midseason. One of the best for processing.

BELLE OF GEORGIA. Considered the best of white-fleshed peaches. Large size, freestone. Delicious flavor. Midseason.

ELBERTA. This variety is most widely planted because it is adaptable to a wide range of soils and climates. Most popular market peach. Beautifully colored, firm, juicy, yellow flesh. Ripens late.

PEACH TREE PRICES	Each	3 to 9 trees Each
2-Yr., 3 to 4 ft.	$3.25	$3.00

All of our trees are shipped "full length" but if notified we will prune them to proper planting length.

Write for Rayner's Bulletin 16 on fruit tree culture

NEW! HARDY APRICOTS FROM MINNESOTA

Imagine apricots so hardy they thrive in the cold climate of Minnesota. These two new varieties were released by the Minnesota Agricultural Experiment Station in 1961 and have proven their ability to produce fine crops of delicious, beautiful apricots in an area with winter temperatures down to 30° below zero. **MOONGOLD** and **SUNGOLD** produce trees about 10 to 12 ft. tall and are ideal for home gardens.

Sturdy, branched trees (2-3 ft.) $3.95 each; 2 for $7.50. Plus postage—see order sheet.

MONTMORENCY SOUR CHERRY

For commercial plantings as well as home use Montmorency is by far the leading variety of sour cherry. The fruit are large, firm, and have a beautiful bright red color. Fruit first ripens in early July and can be kept on the tree about a month. This variety is self-fertile. Rayner's stock of Montmorency is of the excellent virus-free strain that is exceptionally vigorous and productive.

	Each	3 to 9 trees Each
2-Yr., 3 to 4 Ft.	$3.50	$3.25

PEAR TREES

BARTLETT. Old favorite pear considered best for home garden and market throughout the northern half of country. Large, golden yellow pears have a reddish blush. Flavor excellent. Vigorous, highly productive.

SECKEL. A pear of excellent flavor, fruiting in September and October. Fruit medium-sized with a deep brown, reddish cheek when fully ripe. Vigorous, disease resistant.

MAGNESS. Big new blight resistant pear from U. S. Dept. of Agriculture. Fine flavor, high quality, winter hardy. Requires another pear for pollination.

MOONGLOW. Another U.S.D.A. blight resistant variety. Large, delicious pears ripen two weeks before Bartlett. Good pollinator and very hardy.

PEAR TREE PRICES

	Each	3 to 9 trees Each
2-Yr., 3 to 4 ft.	$3.25	$3.00

THORNLESS BLACKBERRIES

Now you can pick delicious blackberries at home without getting scratched and stuck with thorns. Pick your own blackberries in a short-sleeved shirt. These two new introductions are very productive. Ideal for "pick your own" operations and for the home garden. Our limited supply will not last through the season. Order early.

SMOOTHSTEM. Originated from seed of U. S. 1482 (Merton Thornless and U. S. 1411). The seedling selected in 1958 by Dr. D. H. Scott and Dr. D. P. Ink, at Beltsville, has been evaluated in fruiting plots at several locations. It ripens about August 1 at Beltsville. The fruit is large, firm, blunt conic, jet-black when fully ripe, has a delicious flavor. Canes are thornless, very productive and hardy in central New Jersey, central Ohio and southward. Be sure to try some in your garden this year.

THORNFREE. Originated by a cross made in 1956 of U. S. 1410 and U. S. 1414, was selected by Dr. D. H. Scott and Dr. D. P. Ink. It ripens about 3 weeks later than Eldorado, and a week earlier than Smoothstem. The fruit is medium large, firm, blunt conic, glossy black and has a good tart flavor. Canes are thornless, not quite as vigorous as Smoothstem, but very productive in fertile soils. It has been hardy in Oregon, New Jersey, Ohio, Illinois and southward. This is another good blackberry that you should try.

Vigorous #1 Plants: 5 for $3.15; 10 for $5.65; 25 for $10.95; 50 for $20.31; 100 for $37.50

New! RANGER BLACKBERRY

This excellent new blackberry was developed by Dr. I. C. Haut of the University of Maryland. Plants of Ranger are quite vigorous and very productive with large, bright blackberries that are truly delicious when allowed to ripen fully. We recommend it throughout the blackberry area.

DARROW BLACKBERRY

Another fine introduction of the New York Experiment Station. During recent years Darrow has proven to be a dependable producer of big crops, of large, firm, high quality blackberries. Very vigorous and winter hardy.

RAYNER'S DWARF FRUIT TREES

ORNAMENTAL—PRODUCTIVE
SAVE VALUABLE GARDEN SPACE

Trees Are Small, Yet Fruit Is Of Regular Size And Quality

No longer just a special feature of exclusive gardens, dwarf fruit trees are now available to all, and at reasonable prices. These wonderful space-saving trees are produced by budding or grafting regular varieties on special dwarfing rootstocks. Apples are usually dwarfed by use of the Malling root systems, and Quince rootstocks produce dwarf pears. Peaches are budded to special dwarfing root systems. Even though the trees remain much smaller, the fruit is of full size and quality. One outstanding feature of dwarf trees is that they begin to bear fruit when only three or four years old. Just the thing for home gardens where space is so valuable. Write for Rayner's Bulletin No. 16 on Culture of Dwarf Trees.

Dwarf Apple Trees

McINTOSH. Especially suited to Northeast. Big, attractive, red apples with crisp, white flesh. Tender and juicy. Very winter hardy.

WINESAP. Long-time favorite red apple with sweet, juicy flesh. Very vigorous and winter hardy.

GOLDEN DELICIOUS. The queen of apples for beauty and flavor. Big golden apples of superior quality and unsurpassed flavor.

RED DELICIOUS. The national favorite. Large, bright red apples of outstanding beauty and flavor. Very vigorous and productive.

Prices of 2-yr. dwarf apples 3 ft. up, $3.75 each; 3 trees for $10.50

Dwarf Peach Trees

GOLDEN JUBILEE (early). Yellow freestone, exceptional quality, hardy.

HALE HAVEN (midseason). Yellow freestone, firm good for processing.

BELLE OF GEORGIA (midseason). Large, white freestone, delicious flavor.

ELBERTA (late). Beautifully colored, firm, juicy, yellow flesh.

Prices of 2 yr. dwarf peaches, 3 ft. up, $4.25 each; 3 trees for $12.00

Dwarf Cherry Trees

EXCELLENT FOR FRESH USE AND ALL TYPES OF PROCESSING

NORTH STAR is a naturally dwarf hybrid reaching 6 to 8 ft. Very hardy and easy to grow. Fruit is of good size, dark red when ripe and has tart, juicy flesh with a small stone. Very productive. A fine tree for home gardens and small orchards.

METEOR is more upright than North Star but a definite dwarf. Fruit is tart in flavor, clear red in color and large size. Trees are strong and vigorous, hardy, and disease resistant. For best production, plant two varieties to insure proper pollination.

Well-rooted trees, 2 to 3 ft. tall. $3.50 each; 2 trees (one of each variety) $6.50

Dwarf Pear Trees

Grafted to dependable Quince dwarfing stock. Trees grow to about 12 ft. Plant two or more varieties for pollination.

CLAPP'S FAVORITE. A large yellow, early pear of exceptionally fine flavor and quality. Trees are very hardy and productive.

SECKEL. Delicious, small pears. Vigorous and blight resistant. An excellent variety.

BARTLETT. Top quality, very productive. For areas where fire blight is not severe.

Prices of Dwarf Pear Trees:
3 ft. up, $4.25 each; 3 trees for $12.00

Plus Postage. See page 18 and back of order sheet for postage and handling charge.

Regular Plum Trees

Plum trees require very little room and can be planted 20 feet apart. Our plum trees are grafted on myrobolan root stock to insure good, strong trees for many years to come. With beautiful blossoms in the spring and juicy, ripe fruit in the very early fall, plum trees have a double value. Plant some this year.

STANLEY. An excellent, very popular prune-plum for both home and commercial planting. Trees are vigorous and self fertile producing tremendous crops of large, purple plums with a golden flesh that is unexcelled for flavor when fully ripe. Ripens in early September in the New England area.

FELLENBERG. This old favorite variety is also known as German prune or Italian prune. It is self-fruitful and very hardy, producing big crops of large, purple, freestone plums with a firm, sweet, delicious flesh. Excellent for fresh use, market sales, and processing. Ripens in September.

GREEN GAGE. This is truly a high quality plum that every home owner should have in his fruit planting. Its fruit is round with a greenish yellow skin and flesh. The flavor of this juicy, sweet plum is delightful. The tree is hardy and the fruit ripens in September.

BLUE DAMSON. This is a medium round, dark purple, freestone Damson plum. It is tart, wonderful for making preserves and canning. It produces large yields and ripens in September.

Prices of well-rooted Plum Trees: 2 yr., 3 to 5-ft. size, $4.00 each; four trees (1 of each variety) $14.95, plus postage.

Fruit Bowl Special

- 2 **DWARF APPLE TREES**—Your choice of 2 varieties from preceding page.

Regular Price $39.50. Special Fruit Bowl Price $34.00, plus postage.

EXCELLENT FOR SHADE

Nut Trees

HIGHLY PRODUCTIVE

ENGLISH WALNUTS

FAMOUS CARPATHIAN STRAIN

Hardy to 40° below zero

This is the exceptionally hardy Persian or English walnut that has become so popular in most of the northern states. Mature trees are said to be hardy to 40° below zero and still produce big crops of large, thin-shelled, meaty nuts.

These vigorous seedling trees are very dependable for consistent yields as far north as Minnesota. For good crops it is best to have two or more trees for proper pollination. Vigorous, well-rooted, seedling trees.

2 to 3-ft. size, $4.50 each; 3 for $12.00, plus postage.

FAST GROWING, EARLY PRODUCING

Chinese Chestnut

HARDY, BLIGHT RESISTANT

Here is the most popular of all nut trees. In a short time it becomes one of the most beautiful trees on your place, and you will look forward to each fall harvest of delicious nuts that are very much like American chestnuts.

Chinese chestnuts are highly resistant to the blight disease, very hardy, and will produce excellent crops of large nuts when only a few years old. The trees are vigorous and have a spreading shape that makes them fine for shade as well as for their crop. Plant two or more trees for cross-pollination. These are vigorous seedlings selected from highly productive trees that will begin to bear in 2 or 3 years. Hardy to about 20° below zero.

PRICES FOR Sturdy, Well-rooted, Branched Trees 3 to 4 ft., $2.25 each, or $2.00 each in quantities of 10 or more.

Chinese Chestnut Approximately 2/3 Natural Size

Grapes

EASY TO GROW
THEY LAST FOR YEARS

Grapes can easily be grown in any well-drained soil that will produce garden crops. They may be trained along a garden fence, or a regular arbor may be constructed to add to the beauty and landscaping of your yard and garden. Many good varieties have been developed. We have selected the outstanding Eastern varieties of each color grape. Select the color grape you want, or you may want to take advantage of the special and order one of each variety.

CONCORD—The Best Blue

This is the variety with the true grape flavor that has been the favorite for over 100 years. Unsurpassed for home gardens and commercial production. Ripens late.

NIAGARA—The Best White

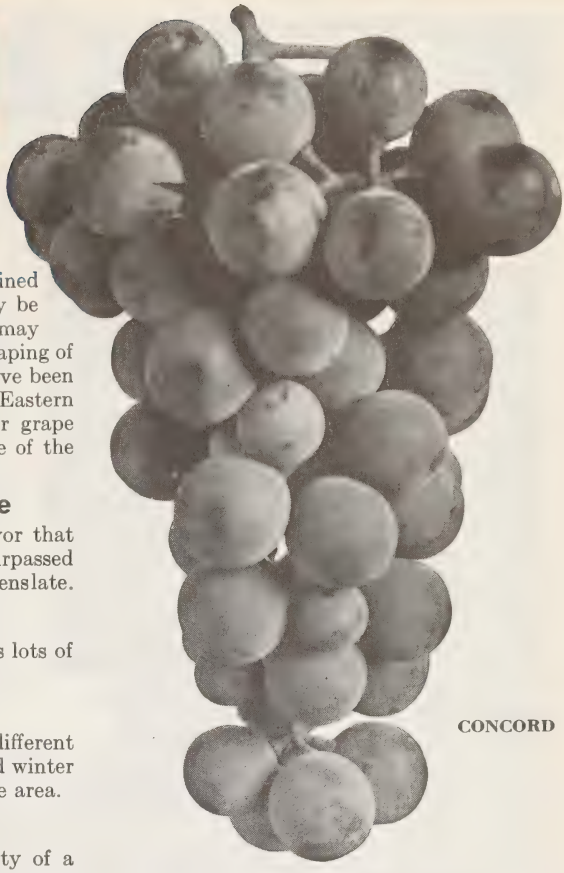
A fine midseason white variety that produces lots of beautiful clusters of large, excellent grapes.

CACO—The Best Red

When fully ripe CACO has a deliciously different flavor that makes it very popular. Its vigor and winter hardiness make it well adapted to eastern grape area.

FREDONIA—The Best Black

For a real flavor treat the wonderful quality of a vine-ripened FREDONIA grape is hard to beat. This excellent early black variety produces extra heavy crops.



CONCORD

Illustration about two-thirds actual size

PRICES FOR CONCORD, NIAGARA, CACO AND FREDONIA

Write for Bulletin No. 14 on Grape Culture

Interlaken

SEEDLESS GRAPE

This excellent introduction of the New York Experiment Station provides the eastern grape grower with a high-quality, seedless variety. Clusters are of good size and well filled with rich, golden fruit. The flesh is meaty and crisp and the flavor is very sweet. Interlaken seedless ripens about a month before Concord. The vines are vigorous and hardy to about 20° below zero.

2-Yr. #1 plants: $1.65 each; 3 for $4.75

GRAPE ARBOR SPECIAL

Start a grape arbor or plant along a fence, but don't pass up this money-saving special.

1	NIAGARA	White
1	CACO	Red
1	FREDONIA	Black
1	INTERLAKEN	Seedless

5 Plants for **$4.95**

ECOLOGY CORNER

Much has been said about pollution and the sad condition of our environment. Words cannot correct these conditions. You can! A planting of trees or shrubs not only beautifies the area but cleans the air, prevents erosion into our streams and provides food and shelter for wildlife. For just a few pennies you can do your part. Select and plant trees and shrubs from these two pages now. You can help our "Green Survival."

Protects Your Property with an Impenetrable Thorny Barrier. Excellent Bird and Game Cover.

Multiflora Rose

The primary use for Multiflora rose is to provide a protective barrier around fields and property lines of farms, estates, and other rural areas. After a few years this vigorous, thorny rose will make an almost impenetrable barrier that is a true living fence. It lasts a lifetime and needs no repairs. It will fence in farm animals and keep out trespassers. Very popular for conservation use to prevent land erosion. Multiflora rose grows well in nearly any soil type and is suitable for all but the most northern areas. Produces small white blossoms followed by clusters of red berries.

PRICE LIST: Vigorous, well-rooted plants

25 plants	$4.25	100 plants	$13.50
50 plants	7.50	500 plants	39.00

See Page 18 and Order Sheet for Postal Charge

WINTER HARDY AZALEAS — RAYNER'S SELECTION OF FINE VARIETIES PROVEN ESPECIALLY HARDY

RED—HINOCRIMSON has brilliant red blossoms. Excellent foliage.
PINK—CORAL BELLE with its dainty pink blooms has long been a favorite.
PURPLE—HERBERT. Beautiful large purple flowers. Very hardy.
WHITE—DELAWARE VALLEY WHITE. Beautiful large flowers. A must for contrast.

Field-grown, 3 yr. plants, $1.50 each; 3 for $4.25.
For Good Results with Azaleas Follow Blueberry Culture and Plant in Shade.

Privet Hedge

Amur River Privet is completely winter hardy in the coldest states. Plants grow rapidly to make a fine hedge or windbreak. Leaves are small, dark green and very attractive. Plant one foot apart. **Vigorous, well-rooted plants 12 to 18 inches tall with 2 or more stems, 10 for $4.00; 25 for $8.95; 50 for $17.00; 100 for $33.00.**

Weeping Willow

For graceful beauty the weeping willow is outstanding. In most of the New England states, west to the Mississippi, and in the South it is a favorite for planting near river and stream banks, but also gives good results in dry land. This is the old-fashioned strain of willow that is so easy to grow and is very hardy.

3 to 4-ft. trees, $1.50 each; 3 for $3.95. See order sheet for postal charge.

Upright Yew

Japanese Yews (Taxus)

The Yews are in greatest demand because they do equally well in shade or sun. Leaves are broader than other evergreens, are not prickly, and have a flat, glossy deep green hue that remains all year around. Yews stand hard clipping and are of dense habit. Do well in ordinary soil and prefer plenty of humus. 8 to 10 in. size. **See page 18 and order sheet for postal charge.**

$1.10 each; 3 for $3.00

Upright Yew—Use at entrances, corners and for drive entrances.

Spreader Yew—Use under windows, around low porches or low foundations.

Be sure to specify Upright or Spreading.

Excellent for All Types of Landscape and Hedge Plantings. Very Hardy.

Spreader Yew

Write for Rayner's Bulletin No. 20 which includes culture of ornamentals and Multiflora Rose.

BEAUTIFUL TREES AND SHRUBS

CLEAN AIR, PREVENT EROSION, PROTECT WILDLIFE

Cherokee Princess White Dogwood

A beautiful companion to the Cherokee Chief red dogwood described inside the back cover. You will love the large, pure white flowers in the spring. The birds will love the glossy red berries in the winter. A must for your yard.

Sturdy well-rooted trees 24 to 30 in. tall, $4.25 each.

EVERGREENS

Rayner's pines and spruces are excellent for Christmas tree plantings. Seedlings that cost only a few pennies now will soon be worth dollars. Make poor land or hillsides produce a real profit. Ideal for erosion control, windbreaks, and hedges.

WHITE PINE

One of the most beautiful of all trees with soft, slender needles having a fine light green color. White pines grow well in nearly any soil type and will give good results in poorly drained land where most other pines will not grow.

NORWAY SPRUCE

Norway spruce has long been a favorite specimen tree in northern gardens where its stately beauty cannot be excelled. Prefers moist soils.

DOUGLAS FIR

This has long been a favorite tree for Christmas plantings since it has a naturally compact type of growth. With relatively little shearing it will produce high-grade trees. Needles of Douglas fir are short and have a blue-green color.

COLORADO BLUE SPRUCE

A truly magnificent tree with an outstandingly different blue-green color. In contrast with other evergreens this blue spruce is most unusual and thus is highly prized for its ornamental value.

SCOTCH PINE

This is one of the best trees for Christmas plantings since it grows very fast and will reach saleable size in five years. Grows well in dry or moist soil and makes a nicely shaped tree with very little shearing. Excellent for ornamental use.

AUSTRIAN PINE

Will grow well in nearly any soil from sand to clay and will tolerate industrial smoke and fumes that kill other pines. Needles are dark green and quite stiff. Develops into nice bushy saleable tree in about seven years.

CANADIAN HEMLOCK

For graceful beauty the hemlock cannot be excelled. It produces short, dark green needles which give its long drooping boughs an almost feathery appearance. Canadian hemlock can be easily pruned to form a fine hedge, an excellent background or sheared specimen trees. Hemlocks are very easy to grow and do well in sun or shade.

Growing Blueberries

These instructions apply to Rayner's hardy, top-quality plants. Be sure to prune about half of top from large bushes before planting.

WHERE BLUEBERRIES CAN BE GROWN: The varieties of blueberries we offer will grow well from North Carolina to Maine and westward to Michigan and Missouri. They also grow well in parts of California, Oregon, and Washington. For best fruit production blueberries require full sunlight. The best time to plant is early spring. Frost or snow will not harm newly planted blueberries.

SOIL ACIDITY: One of the most important factors in successful blueberry culture is to use acid soil—a pH range of 4.0 to 5.5 is considered best. Many soils naturally have this much acidity, but in many areas where blueberries could otherwise grow well the soil is not sufficiently acid. For small-scale plantings this difficulty can be readily overcome. One of the best methods is to dig a hole about 18 in. deep and about the same in width. Mix half of this soil with well-rotted leaf mold or peat and then mix in 3 oz. ammonium sulfate fertilizer plus ¼ lb. of cottonseed meal. Replace this mixture in the hole and set the plant properly, and you have overcome the main problem in growing blueberries.

DRAINAGE: Cultivated blueberries require a uniform supply of moisture but they will not tolerate poorly drained or soggy soil. Avoid heavy clay soil for large plantings.

HOW TO PLANT: If the roots have become dry in shipment, they should be placed in water for about an hour. Best results are obtained if about half of the top growth is pruned from the plant. This allows the plant to become established faster and better. It will rapidly make an abundance of new, sturdy growth. After the holes have been dug and the soil prepared as previously described, the plant should be set so that the upper roots are covered by about an inch of soil. It is very important not to set blueberries too deep in the ground, for they may make poor growth or die. It is helpful to water the newly set plant with a soluble fertilizer, using about one quart of solution per plant. Next the soil should be firmly packed around the roots and a mound of soil made around the edge of the hole so that the plant can be properly watered during dry weather. Rooted cuttings should be grown for two or three years in a bed containing lots of sawdust plus cottonseed meal and acid fertilizer. They can be transplanted as desired.

In commercial plantings blueberries are usually set 4 ft. apart in the row with 8 to 10 ft. between rows. However, in home gardens they may be arranged in any manner and can be pruned to nearly any desired shape. Blueberries are especially suitable for hedge plantings and other ornamental uses.

MULCHING: It is very helpful if a heavy mulch can be maintained around the plants. Any natural organic matter is satisfactory. Sawdust—new or old, oak or pine—also gives excellent results and we strongly recommend its use. However, when sawdust is used as a mulch, it is necessary to add extra nitrogen to the soil. For each ton of sawdust approximately 24 lbs. of actual nitrogen is needed. This can be obtained from 115 lbs. of ammonium sulfate or 72 lbs. of ammonium nitrate. This corresponds to 13 ounces of ammonium sulfate per bushel of sawdust or 8 oz. of ammonium nitrate per bushel. Any other type of fertilizing material could be used if the proper amount of nitrogen is provided.

FERTILIZING: We definitely recommend that blueberries should receive regular fertilizer applications. Use an acid-type, complete fertilizer early in the spring at the rate of about ¼ lb. per each small plant or ½ lb. for large plants. Another application in early summer is usually helpful. Do not apply fertilizer in late summer or fall, since it may make plants tender and thus subject to winter injury. Cottonseed meal, ¼ lb. for young plants and ½ lb. for old plants, is a complete organic fertilizer that is ideal for blueberries and most other plants. Ammonium sulfate, 2 oz. per small plant and ¼ lb. per large plant, is an excellent commercial fertilizer. About 250 lbs. per acre is recommended for large plantings. Half should be applied in March or April and the rest during May or June.

PRUNING: When first planted, about half of the upper branches should be removed. Then during each dormant season further pruning is required. Since blueberries usually make too much top growth, some of this must be thinned out or the fruit will be small. Normally it is best to prune out slender twigs, leaving the heavier stronger growth. Low branches should be removed as well as any weak or dead wood. Write for Rayner's Bulletins 3 and 18 on blueberry pruning.

YELLOW FOLIAGE: Blueberries are especially free of disease and insect troubles and thus do not generally require any spraying or dusting. The most common trouble is a yellow color of the leaves (chlorosis). This yellowing can be corrected in two ways—one is by making the soil more acid by addition of vinegar or sulphur, and the other is to add iron directly to the plant and to the soil. Yellow leaves will often become a healthy green color within a few days, after iron is added. We recommend iron chelate for this purpose. About 1 level tablespoonful in a gallon of water can be applied to the leaves and soil and will be of much help in improving foliage.

CROSS-POLLINATION: Since cultivated blueberries are partly self-sterile it is best to plant at least two varieties for cross-pollination. Any combination of varieties is usually satisfactory.

Rayner's HYBRID BLUEBERRIES

HERE ARE THOSE AMAZING EXTRA LARGE HYBRIDS

EARLY

Varieties are listed in the order they ripen

EARLIBLUE

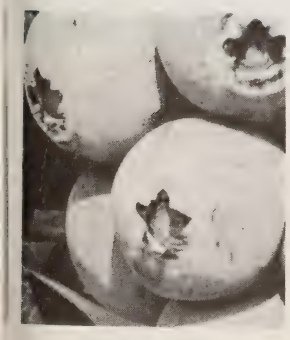
VERY EARLY — **EARLIBLUE** — FINE QUALITY

This excellent commercial berry is about as early as Weymouth and has many fine commercial features. The berries are large and ripen uniformly in big, tight clusters. The picking scar is good and berries are resistant to cracking. Of special interest to home gardeners is the mild sweet flavor of Earliblue. Plants are vigorous and have fine upright growth. This variety has good cold resistance and has proven to be a fine berry for both commercial and home use.

January 22, 1971

I do business with many nurseries but find Rayner Brothers the best to do business with. It is fair in all dealings and bends over backwards to please its customers. The nursery stock is of the highest calibre.

L. S. Berger, Malden, Mass.



IVANHOE

BEAUTIFUL CLUSTERS — **IVANHOE** — UNUSUAL FLAVOR

Ivanhoe is outstanding because of its unusually beautiful berry clusters which look much like bunches of blue grapes. Another feature is the wonderful fruity flavor. However, this flavor does not develop until the berries are fully ripe, which is about a week after they first turn blue. The berries are very large and have a dark blue color. Plants of Ivanhoe grow very rapidly and have a fine appearance. And for flavor we believe that a ripe Ivanhoe is one of the best of all blueberries.

BLUERAY

BLUERAY

EXTRA VIGOROUS—WINTER HARDY

This early variety includes as parents such fine old varieties as Jersey, Pioneer, Stanley, and June and is closely related to Bluecrop. It was released in 1955 by the U. S. D. A. and the New Jersey Agricultural Experiment Station. Since then it has gained rapid acceptance as a commercial berry because of its unusual vigor and tremendous yields of large berries. Blueray has good winter hardiness, giving fine results in Michigan and the New England states.

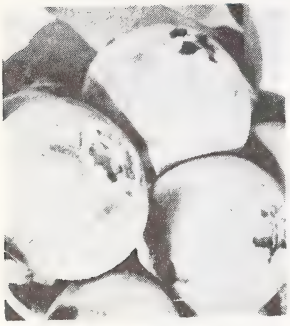
June 3, 1971

My humble thanks to you nice people for your prompt service and quality of plants even on a small order such as ours.

J. F. Holcak, East St. Louis, Ill.

MIDSEASON

BLUECROP



BLUECROP

WINTER HARDY—HEAVY PRODUCER

This excellent midseason variety is another of the outstanding introductions of the U. S. Department of Agriculture. Within just a few years Bluecrop has rapidly gained an outstanding reputation as one of the best of all blueberries for commercial production. It is very winter and frost hardy and can be grown in most of the northern states. Berries are large and maintain their size through the long picking season. Yields are very heavy and quality is good. The plants are fairly upright and have a tendency to develop several stems from the ground.

During winters that are unusually severe, causing direct cold injury to blueberries in some areas, also when a late frost occurs which may severely reduce the crop on some varieties, Bluecrop proved its real value by coming through with a large crop of excellent berries. This is undoubtedly one of the finest of all blueberries.

BERKELEY

BERKELEY

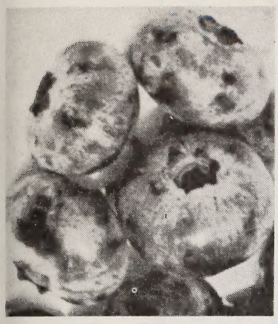
MILD SWEET MOST BEAUTIFUL

This is our selection for the best of all blueberry varieties —for the home garden and commercial planting. It ripens in midseason, producing large loose clusters of the biggest, most beautiful blueberries you have ever seen. Unlike some varieties, the flavor is good almost as soon as it turns blue. Our local customers call for Berkeley when we are picking. They want the best. They want Berkeley. We have one customer who drives over 150 miles to our field to get Berkeley blueberries.

Plants of Berkeley are very vigorous and have an excellent semi-spreading shape and usually a heavy main stem. The leaves are very large and very attractive in summer and fall. For all but the most northern states, we strongly recommend Berkeley as an outstanding blueberry.

HERBERT

SWEET VERY HARDY



HERBERT

Herbert is very different in appearance from most blueberries since its fruit has a shiny black luster and a flattened shape. These extra large berries ripen late in the season in loose clusters and have very good quality. Bushes are vigorous and produce heavy crops. Of much importance is the winter hardiness which permits Herbert to be grown in most of the northern states. It is a good variety for home gardeners since it combines winter hardiness, large berry size, good production, and fine quality. Ripens about a week before Coville.

June 21, 1971

Have had remarkable results with all your plants at various times during the past 25 years.

E. A. GUNNERSEN, Fonda, N. Y.

COVILLE

GOOD FOR FREEZING AND JELLY

This very late-ripening variety greatly prolongs the blueberry season. Under our conditions we begin to pick Earliblue about June 10 and Coville in early July. Berries are large and very attractive and continue to ripen for several weeks. Good flavor does not usually develop in Coville until after the berries have fully ripened, but allow them to remain for a week after turning blue and the quality can be very good.

PLANT TWO VARIETIES FOR POLLINATION

Blueberries

THE OLD FAVORITE VARIETIES

A section of our 100-acre fruiting field

EARLY

WEYMOUTH is the earliest blueberry to ripen. It is excellent for home gardens and a leading commercial variety. Berries are large, dark blue, and have a mild sweet flavor. Plants of Weymouth are low growing and very hardy.

RANCOCAS is a very dependable variety. Because of its vigor and winter hardiness, it can be grown in a wide range of climates and soils. The firm sweet berries are good for preserves and freezing.

MIDSEASON

STANLEY has a tall vigorous bush with beautiful tight clusters of berries. The flavor of Stanley is excellent and thus it is one of the best for "eating off the bush."

CONCORD is a nice home garden variety because of its vigorous plant growth and high quality fruit. The deep blue berries are very good for processing.

PEMBERTON is a late midseason variety. The bush is very erect and easy to grow. The fruit is dark blue and slightly aromatic. Pemberton is very productive.

LATE

JERSEY is the best of all the "Old Favorite Varieties." It is very vigorous and hardy and produces large crops of beautiful berries. It was used as a parent for many of the "New Hybrid Varieties."

RUBEL was selected from the wild in N. J. If you like that wild blueberry flavor, you will like Rubel. The berries are medium size, dark and firm.

DIXI is an extra late variety that can extend the picking season. It is liked for its big size and high quality. Dixi is the largest of the "Old Favorite Varieties."

CHEROKEE CHIEF

Cherokee Chief

RED DOGWOOD

U. S. Plant Patent No. 1710

EACH TREE CARRIES THIS PATENT TAG

At last there is a truly red Dogwood—not a pink; but a fine, deep red that is amazingly different. The wonderful new Cherokee Chief originates from a bud sport and is propagated by grafting on to a sturdy rootstock. Even the new foliage is a red color, and in the fall the leaves are scarlet. In late summer there is an abundance of fine red berries that add to the beauty of this excellent ornamental tree. Cherokee Chief is very vigorous and makes a fine tree with uniform branching.

It will grow in full sun but prefers some shade for best results. Hardy to about 10° below zero.

Sturdy, well rooted trees, 24-30 in. tall, $5.25

SEE PAGE 29 FOR THE NEW CHEROKEE PRINCESS WHITE DOGWOOD

Crimson King Maple

Plant Patent No. 735

The Crimson King variety of Norway maple has long been famous for its deep scarlet foliage which is so different from other trees. It has such beauty and excellent growth habit that it was granted a plant patent. The leaves vary in color from deep scarlet to purplish-red depending on growing conditions. This fine color holds throughout the season.

To improve shipping difficulties we are offering only the 3-4 ft. size which will get off to a flying start and soon develop into magnificent trees. This type of tree is especially dependable.

Your lawn will take on a new look of distinction when you plant your Crimson King Maple. We know you will always cherish one of these beautiful trees.

Vigorous, well-rooted, grafted trees, 3-4 ft. size $5.25. Fully guaranteed. Prices in this catalog DO NOT include postage.
